

KC-SP14

14-INCH
EXTENSION
POLE

The KC-SP14 is a 14-inch pole designed for use with the KC12 “K Column” loudspeaker system. It can replace the included KC-SP32 pole or be used as an extension to provide greater flexibility in system height and deployment.

The KC-SP14 is ideal for deployments where either ceiling height is limited, when the KC12T top loudspeaker mounted directly to the KC12S subwoofer is positioned below the optimal listening height, or when additional elevation is needed to project sound more effectively over larger audiences. The KC-SP14 allows K Column users additional options for optimizing coverage and performance across a wider range of venues and applications.

Lightweight carrying tote is included. Available in Black (BK) or White (WH).

The KC-SP14 allows users to optimize coverage area by increasing or decreasing system height.
